### Microsoft Dynamics NAV monitors projects in detail

---

The association of BLOCK and cooperative companies operates in many countries in the world. But its roots point to the Czech Republic. Since 1991 the company has been orientating to activities connected with projection, delivery, validation activity and buildings service for ambitious technologies in the spheres of usage such as pharmacy, chemistry, electrical engineering and health.

The company used IS NAVISION 3.56 that stopped being suitable in service, capacity and quality of provided data and possibility of their analysis. Particular projects monitoring with the possibility of monitoring the budgets in projects was another and quite important insufficiency. That was the reason why the management of the company decided to implement IS Microsoft Dynamics NAV which was up to their standards.

#### Description of professional solution:

The implementation of the business solution called Microsoft Dynamics NAV was carried out in three months. Requirements analysis was carried out, the solution was proposed and in the following period the phase of programme changes according to the client's requirements was carried out.

The module called Projects was developed after a detailed search. It enables:

- Definition and control of particular projects with the connection to particular customers
- Control of budgets of particular projects with a possibility of definitions of particular project levels – phases, tasks and steps
- Definition of projects teams
- Definition of particular people's responsibility
- Definition of 'Cash Flow' project
- Costs and revenues accounting connected with project and its particular phase, task or step
- Planning of resources to particular projects
- Analysis of supposed and real costs and revenues on particular projects

#### Contributions:

- Cohesion of Projects module and MS Project
- More effective and superior use of bank imports
- Automation of business and technical data sending via e-mail
- Making use of the newest technological Microsoft base with connection to future use of e-business products
- All financial and accounting functions are integrated in one system
- Thanks to the new technology all users' accesses are secured on the level that is provided by NT technologies
- Easy setup of particular projects
- All documents to particular projects are integrated in one place
- Connection with Microsoft Office programmes

- Management functions – overview of main data about projects results
- Possibility to be VAT payer abroad (Poland, Slovakia) and do accountancy in one IS

Following Microsoft technologies were used during the implementation of the solution:

- Microsoft Dynamics NAV
- Microsoft SQL server
- MS Project
